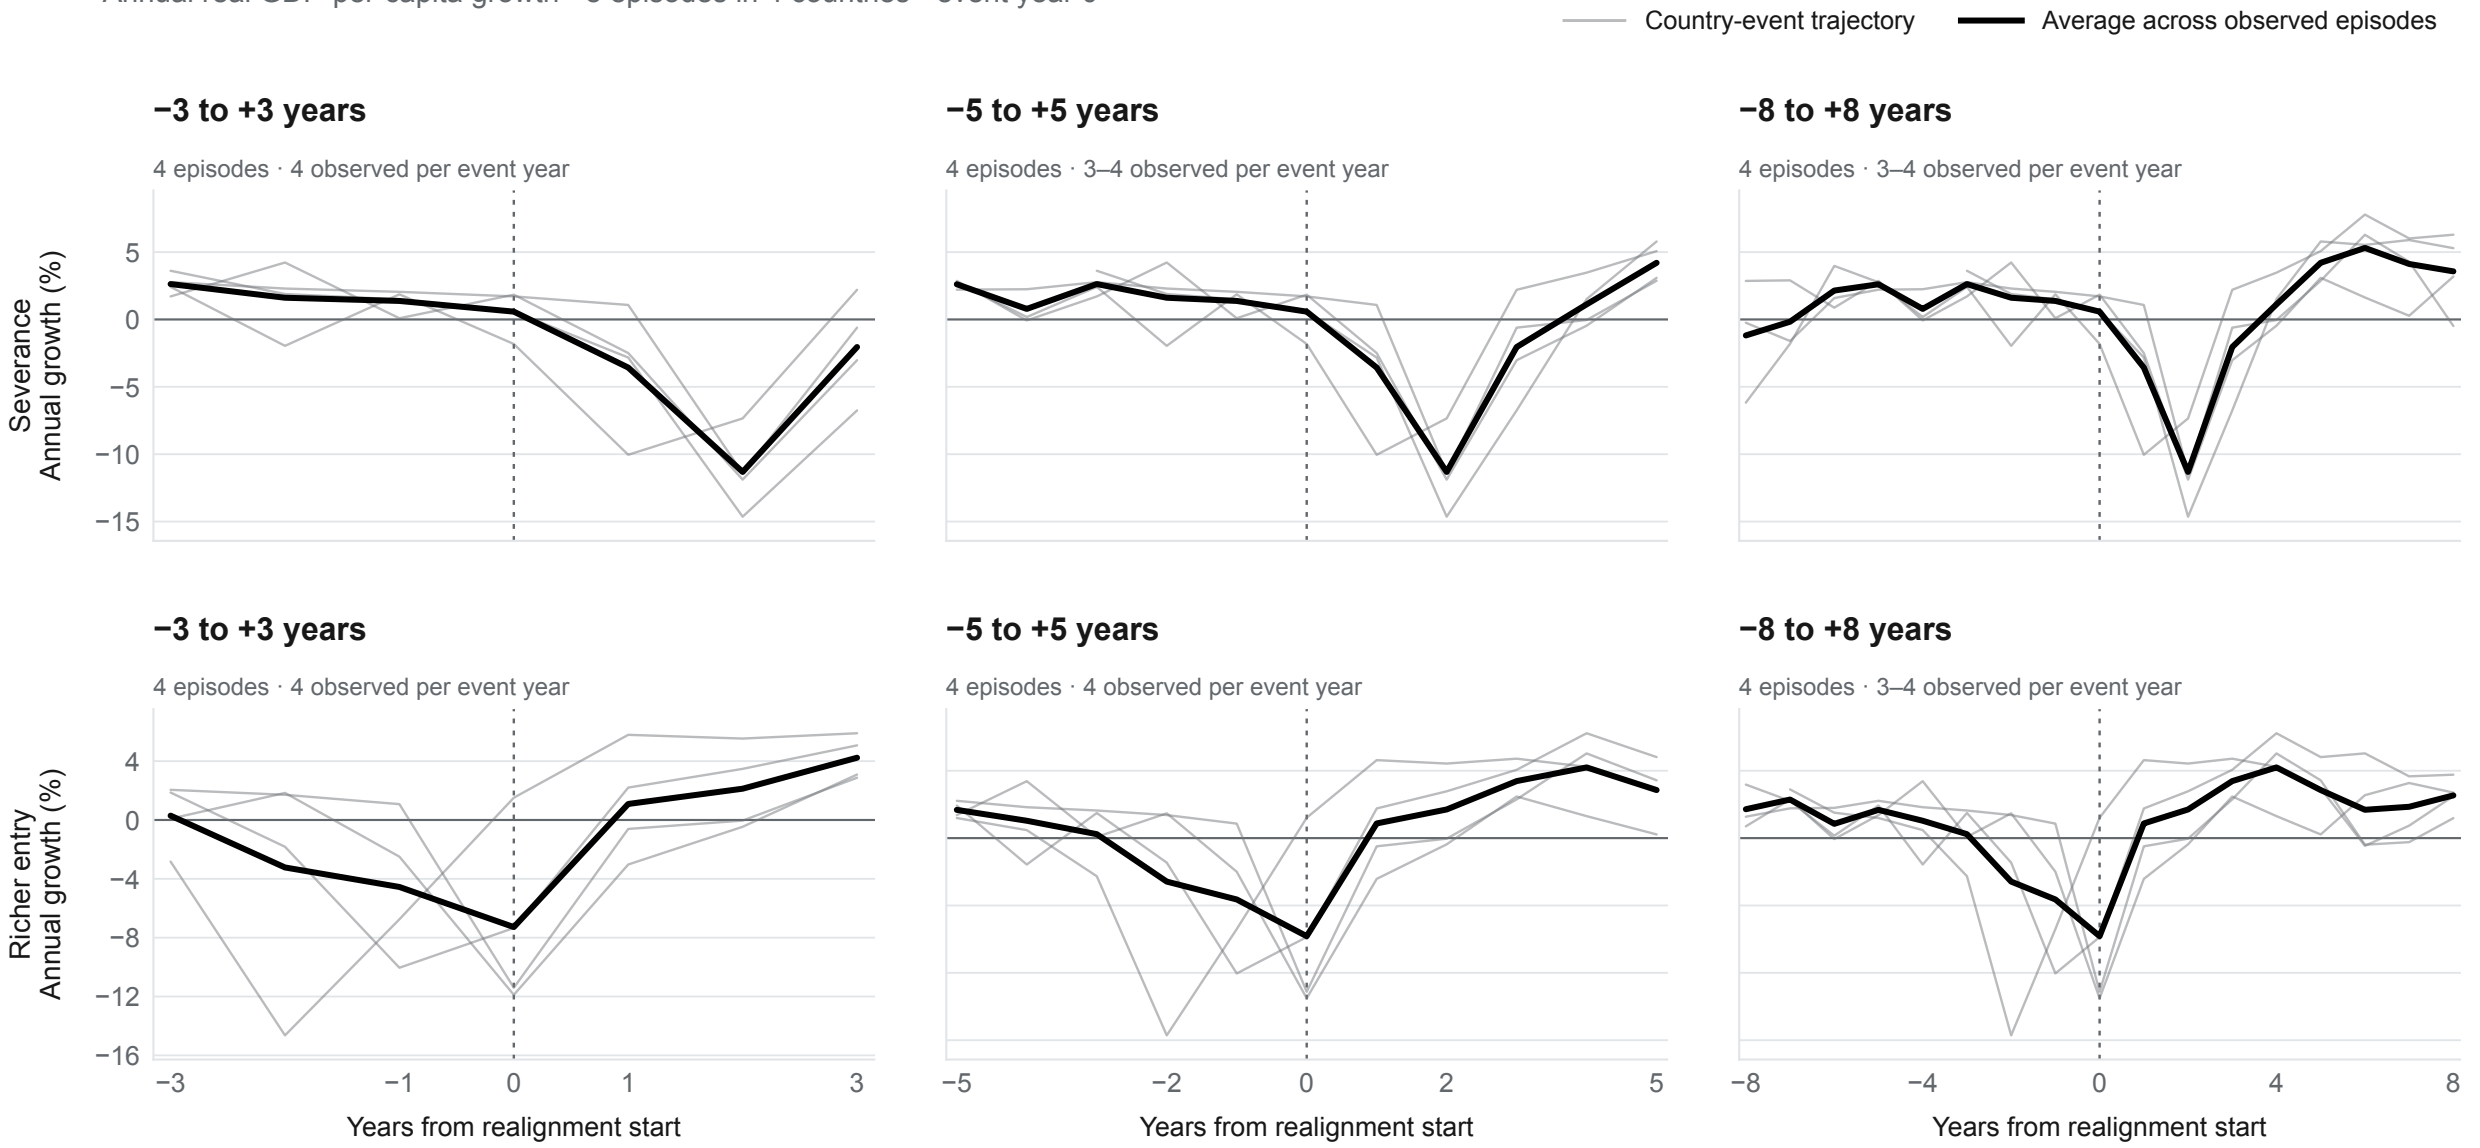
Central Europe: growth around realignments

Annual real GDP-per-capita growth · 8 episodes in 4 countries · event year 0



Preliminary descriptive trajectories, not causal estimates. Start-dated severance and richer-entry episodes from the 1960–2019 sample; paired transitions are retained and shown separately. Gray lines break where annual growth is missing. The black line gives equal weight to episodes observed at each event year, so its composition can change across time. Cultural groups are provisional plotting-only categories, not analytical variables. Countries: Czechia, Hungary, Poland, Slovakia.
